

## LESSON 4 - ASSIGNMENT

1. Are there any books or resources that relate to the natural environment (including both biotic and abiotic components) of the area you visited in your set task? Make a list of these books and/or resources.
2. List the 20 organisms you identified in your set task. Try to classify 2 of these organisms from Kingdom level write down to species level. Then try to classify a further five according to their genus and species only. This is a research task, and one that you would probably have to perform if you were to take eco tours in the area.
3. Discuss the affects of human activity (within recorded history) on the living features of the area selected in question 1.
4. Research and briefly discuss the lifecycles of one plant and one animal from your set task.
5. Don't forget to prepare your interpretive collection for this lesson.
