

LESSON 1 - ASSIGNMENT

1. Find a site to be landscaped. (It could be a park or home garden, a new development or a redevelopment of an older garden). Visit the site and collect and record pre-planning information required to design the landscape. Submit the pre-planning information as part of this assignment.
2. Find five examples of the use of landscape principles. Using sketches and written descriptions, describe the way the garden has been laid out in order to achieve those particular effects.

This (as with all other assignments) is to be sent to your tutor for assessment and comment. You are free to ask any questions you wish to ask and submit them along with your assignments. Your tutor will do his/her best to answer any of your problems.

NOTE: Remember to submit your plant collection.
